Social and Cultural Perspectives on Health, Technology and Medicine: Old Concepts, New Problems By Ciara Kierans, Kirsten Bell, Carol Kingdon

Developments in health, science and technology have long provided fertile analytical ground for social science disciplines. This book focuses on the critical and enduring importance of core concepts in anthropology and sociology for interrogating and keeping pace with developments in the life sciences. The authors consider how transformations in medical and scientific knowledge serve to reanimate older controversies, giving new life to debates about relations between society, culture, knowledge and individuals. They reflect on the particular legacies and ongoing relevance of concepts such as 'culture', 'society', 'magic', 'production', 'kinship', 'exchange' and 'the body'. The chapters draw on the work of key historical and contemporary figures across the social sciences and include a range of illustrative case studies to explore topics such as transplant medicine, genetic counselling, cancer therapy, reproductive health and addiction. Of particular interest to students and scholars of anthropology, sociology, and science and technology studies, this volume will also be a valuable resource for those working in the fields of health and medicine.

Editorial Review

Review

"This groundbreaking collection puts anthropology and sociology in reflective dialogue with recent developments in science and technology to show how core concepts in both disciplines serve to animate and are themselves reanimated by a diverse range of medical technologies and problems. It provides invaluable theoretical and methodological reflections and resources for situating these disciplines as vital 'critical interlocutors' at the centre of contemporary developments in science, medicine and society."

- Sahra Gibbon, *University College London, UK*

"A truly collaborative text that consistently makes the compelling case that anthropology and sociology are imperative to the production and deconstruction of science, medicine and technology. As bio-medicalization escalates at warp speed and technological innovation is infused in both extraordinary and mundane social life, the authors' sage resurrection of classic concepts advances the integral role of social sciences in critical thinking and daily life."

- Lisa Jean Moore, *Purchase College, State University of New York, USA*

About the Author
