Special Functions for Applied Scientists By A.M. Mathai, H.J. Haubold

This book, written by a highly distinguished author, provides the required mathematical tools for researchers active in the physical sciences. The book presents a full suit of elementary functions for scholars at PhD level. The opening chapter introduces elementary classical special functions. The final chapter is devoted to the discussion of functions of matrix argument in the real case. The text and exercises have been class-tested over five different years.

Editorial Review

Review

From the reviews:

"Special functions refer to functions, of one or several real or complex variables, that play key roles in ... one area of mathematics, particularly number theory, combinatorics, complex analysis, differential equations, Lie group representations, probability, statistics, and mathematical physics. ... Summing Up: Recommended. Comprehensive academic, technical program, and professional collections, all levels." (D. V. Feldman, *Choice*, Vol. 46 (5), January, 2009)

"This book differs significant from other text books on special functions, because every chapter deals with the topic on one of the courses of the SSF. ... Many examples illustrate the use of theorems and formulas. At the end of each section exercises are given. ... An interesting book for all scientists interested in applications of special functions in physical sciences. It contains a speedy access to many special functions used in applications and also a lot of applications." (H.-J. Glaeske, *Zentralblatt MATH*, Vol. 1151, 2009)

"This book is based on selected lectures given by several speakers at the Centre for Mathematical Sciences ... from 1995 to 2007. ... In the present book these lectures are written up in a style for self-study by scientists, engineers and mathematicians interested in applications Who can profit from this book? Physicists, engineers, other scientists, applied mathematicians, economists, looking for a well-readable introduction this book is surely recommended to open-minded researchers in any scientific and technical area" (Francesco Mainardi, *Journal of Approximation Theory*, February, 2010)

From the Back Cover

Special Functions for Applied Scientists provides the required mathematical tools for researchers active in the physical sciences. The book presents a full suit of elementary functions for scholars at the PhD level and covers a wide-array of topics and begins by introducing elementary classical special functions. From there, differential equations and some applications into statistical distribution theory are examined.

The fractional calculus chapter covers fractional integrals and fractional derivatives as well as their applications to reaction-diffusion problems in physics, input-output analysis, Mittag-Leffler stochastic processes and related topics. The authors then cover q-hypergeometric functions, Ramanujan's work and Lie groups.

The latter half of this volume presents applications into stochastic processes, random variables, Mittag-Leffler processes, density estimation, order statistics, and problems in astrophysics.

Professor Dr. A.M. Mathai is Emeritus Professor of Mathematics and Statistics, McGill University, Canada.

Professor Dr. Hans J. Haubold is an astrophysicist and chief scientist at the Office of Outer Space Affairs of the United Nations.

About the Author

Arakaparampil Mathai Mathai was born in Arakulam in the Idukki district of Kerala, India. He is the eldest son of Aley and Arakaparampil Mathai. He completed his High School education in 1953 with record marks in St. Thomas High School, Palai. He then entered St. Thomas College in Palai, obtained his B.Sc. degree in Mathematics in 1957 and went to the University of Kerala, Trivandrum, where he completed his M.Sc. degree in Statistics in 1959 with first class, first rank and a golden medal. He joined St. Thomas College as a lecturer from 1959 to 1961. In 1961, he was awarded a Canadian Commonwealth Scholarship and went to the University of Toronto where he completed an M.A. and a Ph.D. in Mathematics and Mathematical Statistics in only three years, the minimum required time. He then joined McGill University in Montreal - one of the most prestigious universities in Canada - where he was Assistant Professor of Mathematics and Statistics, 1964-1968, Associate Professor, 1968-1978, and Full Professor, 1979-2000. Since 2000, he is Emeritus Professor in Mathematics and Statistics at McGill University, Montreal, Canada. He served and is currently serving on editorial boards of a number of journals and he has supervised over 30 Master's students and 5 Ph.D. students. Currently he is the Director of the Centre for Mathematical Sciences, Trivandrum and Pala Campuses, Kerala, India which he is developing into an national, regional, and international centre of research in the mathematical sciences. The holding of five six-week SERC Schools in 1995, 2000, 2005, 2006, and 2007 are a testament of highest achievements in teaching and research in the mathematical sciences for the Centre.

A.M. Mathai is a Fellow of the National Academy of Sciences, India, and a Fellow of the Institute of Mathematical Statistics, United States of America. He is an Elected Member of the International Statistical Institute, The Netherlands. He is the Founder of the Canadian Journal of Statistics, Canada, and the Founder of the Statistical Science Association of Canada (now, Statistical Society of Canada). Professor Mathai is a Honorary Member of the Organizing Committee of the United Nations/European Space Agency/National Aeronautics and Space Administration of the United States of America Workshops on basic space science which have been held, since 1991, in India, Costa Rica, Colombia, Nigeria, Egypt, Sri Lanka, Germany, Honduras, Jordan, France, Mauritius, Argentina, China, United Arab Emirates, India, and Japan. Professor Mathai is author or co-author of thirteen research level books, seven undergraduate-graduate level books, and more than thirty edited and co-edited proceedings. More than 250 published research papers in journals from around the world are showing the breadth of the array of topics that he has tackled as well as the depth, the complexity and the originality of his published results put him in a class all his own. All these publications concern A.M. Mathai's research areas with significant research contributions in mathematical statistics, applied statistics, probability, astrophysics, information theory, mathematics, and specific problems in biological models, orthogonal polynomials, dispersion theory, axiomatization of basic statistical concepts, pollution problems, and transportation problems. I am glad to inform you at this opportunity that an electronic library, recording all of A.M. Mathai's publications, is currently under preparation at the United Nations in Vienna.

The co-author, H.J. Haubold, has applied results of Mathai in the theory of special functions, statistics, and fractional calculus to problems in astrophysics.

Users Review

From reader reviews:

Maria Gomez:

The particular book Special Functions for Applied Scientists will bring you to definitely the new experience of reading a new book. The author style to elucidate the idea is very unique. In case you try to find new book to learn, this book very appropriate to you. The book Special Functions for Applied Scientists is much

recommended to you to study. You can also get the e-book through the official web site, so you can easier to read the book.

Patricia Henderson:

Special Functions for Applied Scientists can be one of your beginner books that are good idea. Many of us recommend that straight away because this book has good vocabulary that will increase your knowledge in words, easy to understand, bit entertaining however delivering the information. The writer giving his/her effort that will put every word into delight arrangement in writing Special Functions for Applied Scientists although doesn't forget the main position, giving the reader the hottest as well as based confirm resource data that maybe you can be among it. This great information can drawn you into fresh stage of crucial contemplating.

Myrtle Hamer:

In this period globalization it is important to someone to receive information. The information will make you to definitely understand the condition of the world. The fitness of the world makes the information much easier to share. You can find a lot of references to get information example: internet, classifieds, book, and soon. You will observe that now, a lot of publisher this print many kinds of book. The actual book that recommended for your requirements is Special Functions for Applied Scientists this publication consist a lot of the information with the condition of this world now. This book was represented just how can the world has grown up. The vocabulary styles that writer value to explain it is easy to understand. Often the writer made some research when he makes this book. This is why this book suited all of you.

Josephine Mares:

Publication is one of source of understanding. We can add our know-how from it. Not only for students but native or citizen need book to know the update information of year to help year. As we know those textbooks have many advantages. Beside most of us add our knowledge, can bring us to around the world. From the book Special Functions for Applied Scientists we can take more advantage. Don't you to definitely be creative people? To get creative person must love to read a book. Simply choose the best book that suited with your aim. Don't become doubt to change your life with this book Special Functions for Applied Scientists. You can more desirable than now.
