The Ultimate Guide To Greenhouse Gardening for Beginners & The Ultimate Guide to Companion Gardening for Beginners (Gardening Box Set) (Volume 6) By Lindsey Pylarinos

Greenhouse Gardening for Beginners: How to Grow Flowers and Vegetables Year-Round In Your Greenhouse + The Ultimate Guide to Companion Gardening for Beginners: How to Use Companion Plants for a Successful Flower or Vegetable Garden Greenhouse Gardening

A greenhouse allows you to plant all year round- This is the most compelling reason why gardening enthusiasts make use of greenhouses. Whether you are a breeder, a farmer, or a hobbyist, you'll love to have the chance to enjoy gardening 24/7. Unfortunately, the fact is that you can't do exactly that on a lot of places in the world. A greenhouse provides you with the opportunity to grow your plants indoors while weather conditions outside are less than ideal. With the ability to change up conditions inside the greenhouse, you can grow particular plants there in any part of the year.

It allows you to control environmental conditions- For most gardening enthusiasts, this is the biggest reason why they go for greenhouses to begin with. On the great outdoors, it's virtually up to your plants to take whatever Mother Nature has to dish out. In terms of survival odds, that is not exactly the most ideal scenario. This is where the greenhouse comes into the picture. You can control some of the most basic environmental parameters such as temperature, soil moisture, light exposure, and humidity inside the greenhouse. Some modern forms of these buildings provide the gardener total control of all external factors that affect plant growth.

What we discuss...

- A Short History of the Greenhouse

- Why Grow Plants in a Greenhouse?
- How to Build Your Greenhouse
- Preparing for Growing Season
- Planting in Cold Weather
- Planting in Warm Weather
- Much, much more!

Companion Gardening

Companion gardening is just planting certain plants together because they will help each other grow and become healthier. It is said that companion gardening is even better than using fertilizers or artificial ways of letting plants grow because the plants can benefit from each other and it's all a natural process.

Some of the basics of Companion Gardening:

- Tall plants are planted near shorter plants so they could some shade for the shorter plants. This works best between sunflowers and corn.
- Companion Plants can lure away pests from green leafy vegetables, and they can also attract beneficial insects to help in the pollination of flowers. For instance, aphids are attracted to plants like Nasturtium, this lures them away from the other plants in the garden.
- You can plant two plants on the same patch which will save you space and time.
- Incompatible Pairings include planting garlic and onions near peas and beans. Because doing so will stunt the growth of the peas and beans.
- It would be best for you to record what is happening in your garden via a logbook or a gardening journal so that you can observe which plants are good with each other and which plants are not.
