Sustainable Energy By Richard Dunlap

SUSTAINABLE ENERGY focuses directly on energy related issues and includes a thorough treatment of all potentially viable energy sources. In most cases, individual chapters are devoted to each alternative energy approach. Although author Richard Dunlap covers past and current energy production methods, the text deals largely with future alternative energy strategies and follows the guidelines of ABET, the major engineering accreditation body. The book approaches these topics on a rigorous level -- familiarity with the basic concepts of freshman Physics and Chemistry is needed. The book contains enough material for a typical one semester course. The end-of-chapter problems are predominantly quantitative in nature. However, most are not straight forward calculations based on substituting values from the chapter in to the appropriate formula. The problems are designed to require the students to analyze information, to make use of material from previous chapters, to correlate data from various sources (not only from the textbook itself but from library, internet or other sources) and in many cases to estimate quantities based on interpretation of graphical data, interpolation of values and sometime just plain common sense. While maintaining a quantitative approach to the study of energy in our society, the text and accompanying problems show that this is a complex and very interdisciplinary topic. This approach is intended to provide students with an appreciation for the real problems that are encountered in the understanding of how we produce and use energy, and the realization that, while exact calculations are important and necessary, a broadly based analysis is often most appropriate.

Editorial Review

Review

"The writing is clear and precise. As mentioned, the section on semiconductor physics boils down a lengthy and complex subject."

About the Author

Richard A. Dunlap is a professor in the Department of Physics and Atmospheric Science at Dalhousie University and has a cross-appointment in the College of Sustainability. He received a B.S. in Physics from Worcester Polytechnic Institute (1974), an A.M. in Physics from Dartmouth College (1976) and a Ph.D. in Physics from Clark University (1981). Since 1981 he has been on the faculty at Dalhousie University. From 2001 to 2006 he was Killam Research Professor of Physics, and since 2009 he has been Director of the Dalhousie University Institute for Research in Materials. He currently is a member of the DREAMS Program (Dalhousie Research in Energy, Advanced Materials and Sustainability). Prof. Dunlap is author of three previous text books Experimental Physics: Modern Methods (Oxford 1988), The Golden Ratio and Fibonacci Numbers (World Scientific 1997) and An Introduction to the Physics of Nuclei and Particles (Brooks/Cole 2004). Over the years his research interests have included critical phenomena, magnetic materials, amorphous materials, quasicrystals, hydrogen storage, and superconductivity. His current research activities are primarily in the area of materials for advanced rechargeable batteries. He has published more than 280 refereed research papers.

From reader reviews:

Jeffrey Haller:

In this 21st hundred years, people become competitive in each way. By being competitive currently, people have do something to make these people survives, being in the middle of the particular crowded place and notice through surrounding. One thing that oftentimes many people have underestimated it for a while is reading. Yes, by reading a guide your ability to survive improve then having chance to remain than other is high. To suit your needs who want to start reading a new book, we give you this specific Sustainable Energy book as beginning and daily reading guide. Why, because this book is greater than just a book.

Sam Stenger:

Often the book Sustainable Energy will bring you to the new experience of reading some sort of book. The author style to elucidate the idea is very unique. In the event you try to find new book to see, this book very acceptable to you. The book Sustainable Energy is much recommended to you to see. You can also get the e-book in the official web site, so you can more readily to read the book.

David Hoag:

This Sustainable Energy is new way for you who has intense curiosity to look for some information since it

relief your hunger of information. Getting deeper you onto it getting knowledge more you know otherwise you who still having little digest in reading this Sustainable Energy can be the light food for yourself because the information inside this specific book is easy to get by anyone. These books create itself in the form which is reachable by anyone, that's why I mean in the e-book type. It should be here for you actually. So , don't miss that! Just read this e-book style for your better life as well as knowledge.

Evelyn Nay:

As we know that book is important thing to add our information for everything. By a guide we can know everything we want. A book is a range of written, printed, illustrated or blank sheet. Every year has been exactly added. This reserve Sustainable Energy was filled in relation to science. Spend your time to add your knowledge about your scientific disciplines competence. Some people has various feel when they reading a new book. If you know how big benefit from a book, you can experience enjoy to read a e-book. In the modern era like today, many ways to get book that you just wanted.
