### **Agroforestry - The Future of Global Land Use: 9 (Advances in Agroforestry)** From Springer

This volume contains a solid body of the current state of knowledge on the various themes and activities in agroforestry worldwide. It is organized into three sections: the Introduction section consists of the summaries of six keynote speeches at the 2nd World Congress of Agroforestry held in Nairobi, Kenya, in 2009; that is followed by two sections of peer-reviewed thematic chapters grouped as “Global Perspectives” (seven chapters) and “Regional Perspectives” (eleven chapters), authored by professional leaders in their respective agroforestry-related fields worldwide. A total of 130 professionals from institutions in 33 countries in both developing and the industrialized temperate regions of the world contributed to the book as chapter authors and/or reviewers. Thus, the book presents a comprehensive and authoritative account of the global picture of agroforestry today.

## **Editorial Review**

### Review

From the reviews:

“This book is derived from the 2nd World Agroforestry Congress, held in Kenya in 2009. Each of its three sections provides a different perspective on agroforestry. ... the synthesis of recent information is not duplicated in typical journal articles and represents a significant contribution to the understanding of agroforestry today. Summing Up: Highly recommended. Upper-division undergraduates through professionals.” (B. D. Orr, *Choice*, Vol. 50 (11), July, 2013)

“The book is well written, beautifully produced and contains a wealth of information on agroforestry today. ... All the chapters are of high quality, containing detailed, state-of-the-art, up-to-date information on the different topics of interest to a broader, multidisciplinary audience. ... It is of interest to anyone engaged in the practice of agroforestry, forestry or agriculture. ... I recommend it to both undergraduates and postgraduate students of agroforestry, forestry, agriculture, ecology or biology, and that a copy of the book is purchased for institutional libraries.” (Zewge Teklehaimanot, *Frontiers of Biogeography*, Vol. 5 (3), 2013)

### From the Back Cover

Agroforestry ranks high among the significant initiatives in improving land management that have occurred the world over during the past few decades. Thanks to the global efforts in research and development during the past three decades, the age-old forms of agroforestry are being transformed from a “*set of practices in search of science*” to a science-based, integrated approach to addressing many of the world’s most serious land-management challenges. Today, nearly a billion hectares of agricultural landscapes already have more than 10% tree cover and an estimated total of 1.6 billion hectares of land worldwide has the potential to be under agroforestry management in the foreseeable future.

The World Congresses of Agroforestry (WCA), held once every five years since 2004, constitute an important set of events in the impressive development of the discipline. The second Congress (WCA2) held in Nairobi, Kenya, in 2009, was attended by about 1,200 delegates from 96 countries. This book was developed to meet the need for a volume containing such outputs that do not fit well into the thematic mode of disciplinary journals. It has been organized into three sections: the Introduction section consists of six summaries of keynote speeches at WCA2; that is followed by two sections of peer-reviewed thematic chapters grouped as “Global Perspectives” (seven chapters) and “Regional Perspectives” (11 chapters), authored by professional leaders in their respective agroforestry-related fields worldwide. A total of 130 professionals from institutions in 33 countries in both developing and the industrialized temperate regions of the world, contributed to the book as chapter authors and/or reviewers. Thus, the book contains a solid body of the current state of knowledge on the various themes and activities in agroforestry worldwide compiled by distinguished leaders in their respective areas of expertise.

### About the Author

Dr. P.K.R. Nair is Professor of Agroforestry at the University of Florida, Gainesville, USA and has been a founder-scientist at the International Centre for Research in Agroforestry (ICRAF), Nairobi, Kenya for about 10 years. He is a leading world authority and a pioneering researcher and educator in agroforestry.

Try to choose the best book for you and try to like reading which.

#### **Theresa Kuykendall:**

As a pupil exactly feel bored to reading. If their teacher asked them to go to the library or even make summary for some guide, they are complained. Just very little students that has reading's soul or real their interest. They just do what the trainer want, like asked to go to the library. They go to presently there but nothing reading very seriously. Any students feel that reading is not important, boring as well as can't see colorful photos on there. Yeah, it is to be complicated. Book is very important for yourself. As we know that on this era, many ways to get whatever we wish. Likewise word says, many ways to reach Chinese's country. So , this Agroforestry - The Future of Global Land Use: 9 (Advances in Agroforestry) can make you

experience more interested to read.
