ANTIGRAVITY PROPULSION: Human or Alien Technologies? (The Underground Knowledge Series Book 2) By James Morcan, Lance Morcan

The biggest mystery of our era finally gets the balanced and unbiased investigation it deserves.

ANTIGRAVITY PROPULSION: Human or Alien Technologies? is a far-reaching exploration into the UFO phenomenon that covers all possible scenarios and discounts nothing.

Written by novelists, filmmakers and independent researchers James Morcan & Lance Morcan, with a foreword by advanced interstellar propulsion systems expert Grant Hayman and an afterword by leading scientist and space industry veteran Dr. Takaaki Misha, one of the great enigmas of all time is examined with equal doses of open-mindedness and skepticism.

This book includes never-before-mentioned accounts of popular UFO topics like Area 51, Roswell and alien abduction claims, as well as tackling less reported subjects such as Nazi and Japanese antigravity experiments and even rarer theories involving quantum physics and lost civilizations of the ancients.

What do all the sightings of UFO's around the world reveal? Who is covering up the existence of these strange craft in our skies? And are the technologies manmade or extraterrestrial in origin?

Forget what you think you already know and be prepared to be surprised.

For those searching for the truth about these exotic technologies and wanting to know why they are being concealed from the public, ANTIGRAVITY PROPULSION is a must read.

Editorial Review

Review

★★★★ "I was particularly impressed by the unbiased, objective, journalistic views presented in this interesting book. The authors look at all angles and possibilities, allowing the reader to digest them on his or her own merits versus being nudged or sometimes shoved to the conclusions desired, as is the case of many such books.

The authors assume that UFOs do indeed exist, a fact which is gradually being accepted as more evidence is released and credible witnesses continue to come forward. However, rather than assuming these strange vehicles are of extraterrestrial origin, the possibility is presented that perhaps not all of them are.

All possibilities are covered, including connections between Japan and the Nazis of which I was previously unaware. The authors do an excellent job of staying on-topic as expressed by the title versus going off on tangents, which is so easy to do in a field where there are so many unanswered questions."

-Marcha Fox, sci-fi author and ex-NASA engineer/manager (employee of NASA's Johnson Space Center in Houston, TX)

From the Author

Excerpt from the Foreword by Grant Hayman:

We like to think our current civilization is the wisest, most intelligent out of all civilizations which have come before and any which may yet exist, but can we be so absolutely certain of this?

Sure, we are masters of the automobile, computer experts and rocket scientists, but is this really the only successful path, the only productive knowledge which can be known by a civilization? Can we be so certain there is no other, easier, better, smarter way or more efficient way to live upon this world and perhaps even to travel amongst the stars to other worlds?

To those interested in traveling to other worlds, especially to other stars, it is painfully clear rocket technology cannot be the way we will bridge these vast distances.

One must consider with all seriousness, if rocket technology does not enable us to master gravity, then the possibility must exist that there is some other technology, some other science which we have yet to discover. A new science which puts these far off worlds within reach and could put our own world, in reach of other civilizations besides our own.

One can argue such conjecture is nonsense and better applied to a work of science fiction. *However*, as you will read in this book by James & Lance Morcan, many prominent, highly educated, well regarded and, I might add, completely sane individuals have been quoted affirming "such an advanced new science does exist" and that "there is a new technology which can cause great, positive changes and prosperity upon our planet for all people".

When such influential and respected people make such extraordinary claims, should we so quickly dismiss such ideas?

Do we wish to remain safe at home so we do not fall off the edge of the world, or do we have the courage and humility to seriously consider the precious and valuable glimpse into our own possible future that these

pioneering minds are putting before us?

Grant Hayman

Independent advancedpropulsion researcher

Founder of *OVAL Tech Advanced Interstellar Space Propulsion Systems*

Excerpts from the Introduction chapter:

Possibly more than any other exotic science, rumored or otherwise, *antigravity propulsion systems* are the most suppressed - not to mention the most difficult to gather concrete evidence on.

Antigravity propulsion systems are essentially technologies that allow spacecraft to levitate free from the force of gravity instead of traveling in the conventional manner of all other known aeronautical and aerospace machines.

This quantum physics-style theory of antigravity spacecraft suggests they are completely free from the force of gravity and this is said to explain the incredible aerial maneuvers of UFO's witnesses have reported seeing all over the world for decades.

These technologies represent what may very well be the greatest scientific mystery of our times.

The key question this book explores in regard to antigravity propulsion is as the subtitle suggests: *Human or alien technologies?*

In other words, are the antigravity spacecraft untold people have reported seeing in our skies actually manmade and the result of long-suppressed, strictly classified inventions by great scientists such as Nikola Tesla and Viktor Schauberger - or are they technologies that have been stolen from, or donated or unintentionally left behind by, extraterrestrials?

To do justice to the results of our research, we go off on a few tangents in places - as you'll see. But please bear with us as you read through what we believe to be the main arguments for and against the various theories relating to the mysterious, mind-blowing phenomenon that is antigravity propulsion.

James Morcan & Lance Morcan

Excerpts from the Afterword by Dr. Takaaki Musha:

This well balanced and unbiased book is long overdue for those searching for the truth about advanced technologies currently being concealed from the general populace by elite levels of governments.

Formerly, I was employed for many years as a senior research scientist developing naval underwater weapon systems at the Technical Research and Development Institute of the Ministry of Defense in Japan.

I was also part of a team of scientists in the Advanced Space Propulsion Investigation Committee (ASPIC), which was organized by the Japan Society for Aeronautical and Space Sciences in 1994. ASPIC's purpose was to study all kinds of non-chemical space propulsion systems as opposed to conventional rocket systems

for spacemissions to nearby planets, the Moon and the outer Solar System. This includedfield propulsion systems which utilize zero-point energy, the electrograviticeffect and the non-Newtonian gravitic effect predicted in Einstein's Theory ofGravity.

During my time with ASPIC, I strongly felt that some of the gravitycontrol systems could have been realized, or had already been realized, butwere being overshadowed by existing science.

Spiraling out of myactivities as a member of ASPIC, I wrote a book in collaboration with ProfessorMário Pinheiro, of Portugal, and Dr. Thomas Valone, of the Integrity ResearchInstitute, in the US, titled *Gravitoelectromagnetic Theories and TheirApplications to Advanced Science and Technology* (published by Nova SciencePublishers, in New York). That book describes how gravitoelectromagnetismrefers to a set of formal correlations between the equations for relativisticgravitation and electromagnetism.

The book also mentionshow T.T. Brown, who initially discovered the electrogravitic effect, performedseveral experiments during the 1950's and succeeded in generating thrustwithout the reliance on a surrounding medium by applying high voltage tomaterials with high dielectric constants.

Thomas Valone's 1993 book, *ElectrograviticsSystems: Reports on a New Propulsion Methodology*, quotes antigravityresearcher Dr. Paul LaViolette as saying electrogravitic technology was firstdeveloped under a US Air Force black project in 1954. Valone's book alsoalleges that the top-secret technology has since been used in the B-2 stealthbomber to provide an exotic auxiliary mode of propulsion.

Once I had a chance toread Colonel Philip J. Corso's *The Day After Roswell*, which rates amention in this book, I was astonished to learn the Roswell crashed UFO was,according to the colonel, propelled by a technology that sounded remarkablysimilar to the electrogravitic system developed by the US Air Force.

What could be behindthis apparent coincidence? In *Antigravity Propulsion*, James & LanceMorcan have pointed out the possible connectionbetween the Nazis, Japan and the Roswell UFO crash.

Dr. Takaaki Misha

Director of the Advanced-Science Technology Research Organization, Yokohama, Japan.

Former senior research scientist at the Technical Research andDevelopment Institute of the Ministry of Defense, Japan.

Users Review

From reader reviews:

Eric Johnson:

Do you among people who can't read pleasant if the sentence chained in the straightway, hold on guys this particular aren't like that. This ANTIGRAVITY PROPULSION: Human or Alien Technologies? (The Underground Knowledge Series Book 2) book is readable by simply you who hate those perfect word style. You will find the information here are arrange for enjoyable looking at experience without leaving possibly decrease the knowledge that want to supply to you. The writer associated with ANTIGRAVITY PROPULSION: Human or Alien Technologies? (The Underground Knowledge Series Book 2) content conveys thinking easily to understand by most people. The printed and e-book are not different in the content but it just different in the form of it. So , do you nevertheless thinking ANTIGRAVITY PROPULSION: Human or Alien Technologies? (The Underground Knowledge Series Book 2) is not loveable to be your top listing reading book?

Gilbert Kimmel:

Typically the book ANTIGRAVITY PROPULSION: Human or Alien Technologies? (The Underground Knowledge Series Book 2) will bring someone to the new experience of reading a new book. The author style to clarify the idea is very unique. When you try to find new book to read, this book very suited to you. The book ANTIGRAVITY PROPULSION: Human or Alien Technologies? (The Underground Knowledge Series Book 2) is much recommended to you to learn. You can also get the e-book through the official web site, so you can more easily to read the book.

Roger Borquez:

Would you one of the book lovers? If so, do you ever feeling doubt when you are in the book store? Try and pick one book that you never know the inside because don't assess book by its include may doesn't work this is difficult job because you are frightened that the inside maybe not while fantastic as in the outside look likes. Maybe you answer could be ANTIGRAVITY PROPULSION: Human or Alien Technologies? (The Underground Knowledge Series Book 2) why because the amazing cover that make you consider with regards to the content will not disappoint you actually. The inside or content is actually fantastic as the outside or cover. Your reading 6th sense will directly guide you to pick up this book.

Jose Enriquez:

As we know that book is essential thing to add our knowledge for everything. By a guide we can know everything we want. A book is a group of written, printed, illustrated or maybe blank sheet. Every year seemed to be exactly added. This guide ANTIGRAVITY PROPULSION: Human or Alien Technologies? (The Underground Knowledge Series Book 2) was filled about science. Spend your free time to add your knowledge about your scientific disciplines competence. Some people has distinct feel when they reading a book. If you know how big benefit of a book, you can sense enjoy to read a reserve. In the modern era like now, many ways to get book you wanted.
