Principles of Woven Fabric Manufacturing By Abhijit Majumdar

Weaving as a subject is an integral part of any textile engineering/technology program, the others being fibre manufacturing, yarn manufacturing and textile chemical processing. This book amalgamates both the compartments (preparatory processes and the loom mechanism) of weaving technology and presents a holistic picture. The machine descriptions are presented from the viewpoint of principles and no attempt has been made to make them exhaustive by incorporating various models or variants. The mathematical relations among various parameters have been derived starting from the first principles and each chapter concludes with solved numerical examples.

Editorial Review

Review

"The main strengths of the textbook are a clear, logical, modern and understandable explanation of the subject matter in the field of weaving technology. Graphics, photos and practical examples effectively supporting the consolidation and understanding of the content presented. A perfect textbook for students and weaving experts."

? *Polona Dobnik Dubrovski, The University of Maribor, Slovenia*

"This book is relevant and useful both to undergraduates and undergraduates who are pursuing a career in apparel and textiles."

? *John McLoughlin, Manchester Metropolitan University, United Kingdom*

"The book titled **Principles of Woven Fabric Manufacturing** is one of the comprehensive concept books on two dimensional (2D) weaving and weaving related subjects. My overall view on the book is that each sub content is explained very simple way for the reader to understand. In addition, it includes recent innovations especially data management, up to date process automation and basic calculation principles. I recommend the book students, engineers, researchers and teachers in various colleges and Universities as well as private companies and state and private research organizations."

? *Kadir Bilisik, Erciyes University, Turkey*

"The book provides technical treatise on weaving including preparatory weaving processes and elementary fabric design. The content of the book is written in simple and easy to understand language. Numerical exercises are included; which will benefit students and early career practitioners."

? *Rajesh Anandjiwala, CSIR Materials Science & Manufacturing, Port Elizabeth, South Africa*

About the Author

Dr. Abhijit Majumdar is currently an associate professor in textile engineering group at IIT, Delhi. He graduated from Calcutta University with first class first position in textile technology program. Subsequently, he acquired M.Tech degree in Textile Engineering from IIT Delhi and Ph.D in Production Management from Jadavpur University, Kolkata. He has worked in industries like Voltas Limited and Vardhman Group. He has published 45 research papers in international refereed journals. His research areas include protective textiles, soft computing applications, operations and production management. He is the associate editor of Journal of the Institution of Engineers (India) Series E (Chemical and Textile Engineering). He is in the panel of international editorial board of Romanian Textile and Leather Journal, Open Textile Journal (Bentham Open) and Journal of Textiles. He is life member of professional bodies like International Society of Multi-Criteria Decision Making, Global Institute of Flexible Management Systems, Association for Machines and Mechanisms, Indian Society of Technical Education, The Textile Association (India) and Institution of Engineers (India).

Users Review

From reader reviews:

Marjorie Ingram:

Information is provisions for people to get better life, information nowadays can get by anyone from everywhere. The information can be a expertise or any news even a problem. What people must be consider if those information which is from the former life are challenging to be find than now is taking seriously which one is acceptable to believe or which one often the resource are convinced. If you find the unstable resource then you buy it as your main information there will be huge disadvantage for you. All those possibilities will not happen within you if you take Principles of Woven Fabric Manufacturing as the daily resource information.

Vincent Overly:

People live in this new morning of lifestyle always make an effort to and must have the time or they will get lots of stress from both way of life and work. So , whenever we ask do people have extra time, we will say absolutely yes. People is human not just a robot. Then we request again, what kind of activity have you got when the spare time coming to you actually of course your answer can unlimited right. Then ever try this one, reading publications. It can be your alternative inside spending your spare time, the particular book you have read will be Principles of Woven Fabric Manufacturing.

Lucille Davis:

Do you have something that you want such as book? The guide lovers usually prefer to select book like comic, short story and the biggest one is novel. Now, why not seeking Principles of Woven Fabric Manufacturing that give your satisfaction preference will be satisfied by simply reading this book. Reading practice all over the world can be said as the method for people to know world far better then how they react to the world. It can't be mentioned constantly that reading addiction only for the geeky man or woman but for all of you who wants to always be success person. So , for every you who want to start examining as your good habit, you may pick Principles of Woven Fabric Manufacturing become your starter.

Phyllis Thompson:

As we know that book is essential thing to add our know-how for everything. By a book we can know everything we would like. A book is a list of written, printed, illustrated or perhaps blank sheet. Every year ended up being exactly added. This publication Principles of Woven Fabric Manufacturing was filled with regards to science. Spend your time to add your knowledge about your science competence. Some people has several feel when they reading any book. If you know how big good thing about a book, you can experience enjoy to read a publication. In the modern era like currently, many ways to get book you wanted.
