## **Sapiens: A Brief History of Humankind** By Yuval Noah Harari

One hundred thousand years ago, at least six human species inhabited the earth. Today there is just one. Us. Homo sapiens. How did our species succeed in the battle for dominance? Why did our foraging ancestors come together to create cities and kingdoms? How did we come to believe in gods, nations, and human rights; to trust money, books, and laws; and to be enslaved by bureaucracy, timetables, and consumerism? Bold, wide-ranging, and provocative, *Sapiens* integrates history and science to challenge everything we thought we knew about being human: our thoughts, our actions, our heritage . . . and our future.

## Editorial Review

### Amazon.com Review

**An Amazon Best Book of the Month for February 2015:** Yuval Noah Harari has some questions. Among the biggest: *How did Homo sapiens (or Homo sapiens sapiens, if you're feeling especially wise today) evolve from an unexceptional savannah-dwelling primate to become the dominant force on the planet, emerging as the lone survivor out of six distinct, competing hominid species?* He also has some answers, and they're not what you'd expect. Tackling evolutionary concepts from a historian's perspective, *Sapiens: A Brief History of Humankind*, describes human development through a framework of three not-necessarily-orthodox "Revolutions": the Cognitive, the Agricultural, and the Scientific. His ideas are interesting and often amusing: *Why have humans managed to build astonishingly large populations when other primate groups top out at 150 individuals?* Because our talent for gossip allows us to build networks in societies too large for personal relationships between everyone, and our universally accepted "imagined realities"—such as money, religion, and Limited Liability Corporations—keep us in line. *Who cultivated whom, humans or wheat?* Wheat. Though the concepts are unusual and sometimes heavy (as is the book, literally) Harari's deft prose and wry, subversive humor make quick work of material prone to academic tedium. He's written a book of popular nonfiction (it was a bestseller overseas, no doubt in part because his conclusions draw controversy) landing somewhere in the middle of a Venn diagram of genetics, sociology, and history. Throughout, Harari returns frequently to another question: *Does all this progress make us happier, our lives easier?* The answer might disappoint you. --Jon Foro

### Review

"Harari is provocative and entertaining." ---Publishers Weekly

### From the Back Cover

One hundred thousand years ago, at least six human species inhabited the earth. Today there is just one. Us. *Homo sapiens*. How did our species succeed in the battle for dominance? Why did our foraging ancestors come together to create cities and kingdoms? How did we come to believe in gods, nations, and human rights; to trust money, books, and laws; and to be enslaved by bureaucracy, timetables, and consumerism? And what will our world be like in the millennia to come?

In *Sapiens*, Professor Yuval Noah Harari spans the whole of human history, from the very first humans to walk the earth to the radical—and sometimes devastating—breakthroughs of the Cognitive, Agricultural, and Scientific Revolutions. Drawing on insights from biology, anthropology, paleontology, and economics, and incorporating full-color illustrations throughout the text, he explores how the currents of history have shaped our human societies, the animals and plants around us, and even our personalities. Have we become happier as history has unfolded? Can we ever free our behavior from the legacy of our ancestors? And what, if anything, can we do to influence the course of the centuries to come?

Bold, wide-ranging, and provocative, *Sapiens* integrates history and science to challenge everything we thought we knew about being human: our thoughts, our actions, our heritage...and our future.
